DET Risk Process

Risk can be described as anything; event, practice, process, activity, etc. that could hinder or help achievement of stated goals or objectives.

DET Risk Management Framework - Assessment Tools

Consequence Criteria: This guide provides indicative terms against which the significance of risk is evaluated.

Likelihood Criteria: This guide provides the indicative terms against which the probability of a risk event occurrence is evaluated.

Descriptor	Description	Indicative %	Indicative Frequency
Almost Certain	Expected to occur	>95%	Multiple times in the next year
Likely	Probably will occur (no surprise)	66-95%	At least once in the next year
Possible	May occur at some stage	26-65%	Once in the next 3 years
Unlikely	Would be surprising if it occurred	5-25%	Once in the next 5 years
Rare	May never occur	<5%	Once in the next 10 years

Note:
 1. **The Likelihood Criteria** refers to the likelihood of the consequence descriptor you have selected i.e. the likelihood of a 'major' consequence.
 2. **The Indicative Frequency** may not be relevant when assessing risks related to repeated activities, or when objectives are to be delivered over discrete periods of time. It should not be the sole basis for assessment.

DET's Control Effectiveness: Indicates the self-assessment of control effectiveness.

Controls Effectiveness Rating and Criteria	
Ineffective	<ul style="list-style-type: none"> The design of controls overall, is ineffective in addressing key causes and/or consequences. Documentation and/or communication of the controls does not exist (e.g. policies, procedures, etc.). The controls are not in operation or have not yet been implemented.
Needs Improvement	<ul style="list-style-type: none"> The design of controls only partially addresses key causes and/or consequences. Documentation and/or communication of the controls (e.g. policies, procedures, etc.) are incomplete, unclear or inconsistent. The controls are not operating consistently and/or effectively and have not been implemented in full.
Acceptable	<ul style="list-style-type: none"> The design of controls is largely adequate and effective in addressing key causes and/or consequences. The controls (e.g. policies, procedures, etc.) have been formally documented but not proactively communicated to relevant stakeholders. The controls are largely operating in a satisfactory manner and are providing some level of assurance.
Effective	<ul style="list-style-type: none"> The design of controls is adequate and effective in addressing the key causes and/or consequences. The controls (e.g. policies, procedures, etc.) have been formally documented and proactively communicated to relevant stakeholders. The controls overall, are operating effectively so as to manage the risk.

DET's Risk Rating Matrix: Used to combine consequence with likelihood to determine the overall level of risk.

Risk Rating Matrix		Consequence				
		Insignificant	Minor	Moderate	Major	Severe
Likelihood	Almost Certain	Medium	High	Extreme	Extreme	Extreme
	Likely	Medium	Medium	High	Extreme	Extreme
	Possible	Low	Medium	Medium	High	Extreme
	Unlikely	Low	Low	Medium	Medium	High
	Rare	Low	Low	Low	Medium	Medium

DET's Acceptability Chart: Used to decide whether the risk is acceptable, based on the rating calculated.

Extreme = Unacceptable (must have Principal / School Council / Regional Office oversight)	Immediately consider whether the activity associated with this risk should cease. Any decision to continue exposure to this level of risk should be made at Principal / School Council / Regional Office level, be subject to the development of detailed treatments, on-going oversight and high level review.
High = Tolerable (with ongoing Principal Class Officer review)	Risk should be reduced by developing treatments. It should be subject to on-going review to ensure controls remain effective, and the benefits balance against the risk. Escalation of this level of risk to Principal Class Officer level should occur.
Medium = Tolerable (with frequent risk owner review)	Exposure to the risk may continue, provided it has been appropriately assessed and has been managed to as low as reasonably practicable. It should be subject to frequent review to ensure the risk analysis remains valid and the controls effective. Treatments to reduce the risk can be considered.
Low = Acceptable (with periodic review)	Exposure to this risk is acceptable, but is subject to periodic review to ensure it does not increase and current control effectiveness does not vary.
